@ryen\_mac Twitter

<https://aka.ms/ryen>

- Summary about my journey until now
- Dive into how IAM fits into security
- Challenges introverts have to overcome  
“Get comfortable with being uncomfortable”
- What I did to get to where I wanted to be
- Creating opportunities for yourself

~ About a decade later

~6 years at Microsoft

Software  
Engineer Identity

PM Identity

PM MDATP

Manager -  
Cloud Solution  
Architect

Challenge: Figuring out what I wanted

- Don't get stuck in analysis paralysis
- Fail fast! Try something, and if it doesn't work, try something else
- Get comfortable with being uncomfortable.

Challenge: Getting my foot in the door

- Not always about *what* you know, but *who* you know. That means, yes, you ‘have to’ talk to people
- The requirements are not the requirements
- Get comfortable with being uncomfortable.

Challenge: Interviewing (with a human!)

- Be authentic and excited about the role
- Mirroring (but don't over-do it!)
- Get comfortable with being uncomfortable.

Challenge: Asking for what I want  
(creating opportunities for yourself)

➤ Write it down

➤ Let and ask others to contradict your (negative) internal monologue

If you have one, apparently some people don't? weird.

➤ Get comfortable with being uncomfortable.

- No degree and I failed a bunch of times before I got into tech
- Once in tech, an event got me interested in protecting customers, I let that event fuel my passion
- Challenges we introverts have in talking to people, saying what we want, and getting where we want, because.... well, talking to people
- How to overcome those challenges to create opportunities for yourself

and finally.....

Get comfortable with being uncomfortable.  
When you're uncomfortable it means you're  
growing

Thank you!
